## **Inter-Professional Learning - Scenario Four**

Winston is a 25-year-old Afro-Caribbean man who has a diagnosis of schizophrenia. He lives alone in his city flat and is unemployed at the moment. Winston broke his leg playing football and following this he was admitted to A and E. Winston is complaining of pain and is unable to walk.

All Winston's family live some distance from him and he has little contact mostly because he ignores their calls and makes little effort to communicate with them.

### **YOU NEED TO COMPLETE THE FOLLOWING TASKS**

**Task One:** Consider the following five questions as you will have to demonstrate an understanding of these to your facilitator in the final session.

- A) What are the needs of this person?
- B) What are the people who might be involved in meeting this person's needs (list all people/agencies)?
- C) Outline their different roles and consider different professional values.
- D) How might interprofessional working benefit and/or disadvantage this person?

**Task Two:** Design and create an information leaflet that you could give to this person and his carers. This leaflet should introduce the team and should give information on the services they provide to meet their needs. The leaflet will be on one piece of A4 paper, you need to give a copy and describe your leaflet to your facilitator and your other group members at the final session of LIP level one.

Reflect on the benefits and challenges of working together as an interprofessional group on this task.
